

# DietMaster - Product Review Sheet

Version 8.0

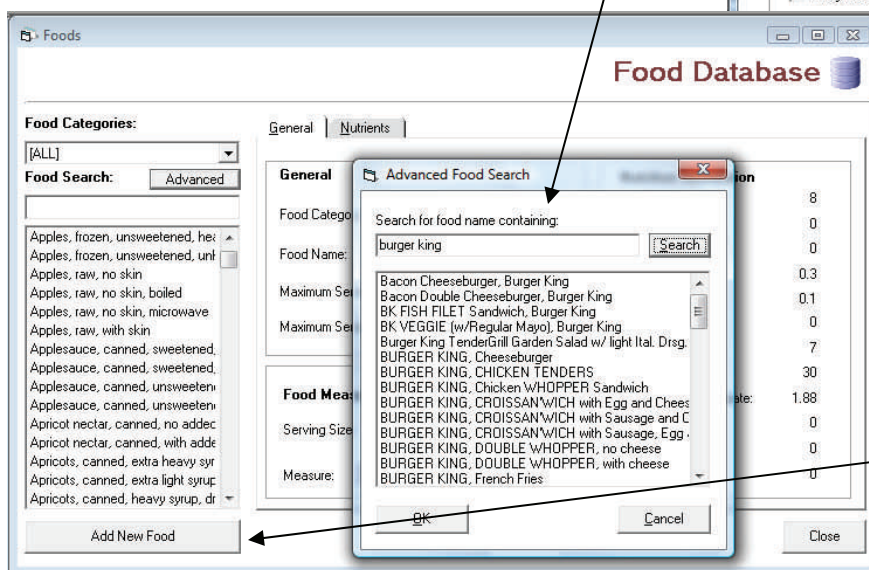

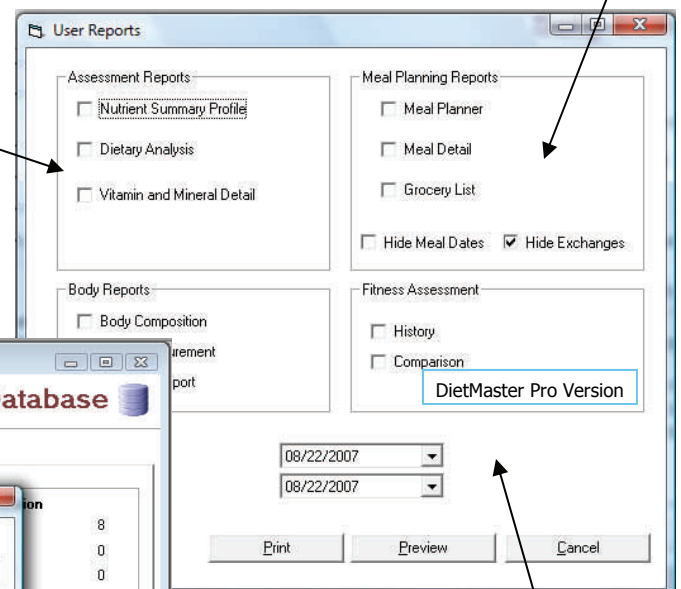

## Other Features Review

Below are a few screen shots of the DietMaster application tool bar, User Report options screen and the Food Database screen. Refer to other Product Review Sheets for additional information regarding the applications features and functionality.

User Report options include Assessment reports to identify deficiencies in nutrients and track current caloric and macro nutrient intake to compare against recommended intake.

Food Database screen provides nutritional details of over 13,000 food selections including fast foods, popular coffee drinks and brand named foods. Use the Advanced "keyword" search feature to easily locate foods.

With the User Report options screen you can select to print multiple reports at one time by clicking on check-boxes, setting the date range, and then clicking Print.

Can't find a food within the database? Add your own favorite foods by entering the nutrition specifications directly from a food label.
